

NGUYEN TRUONG GIANG

WEB DEVELOPER

CONTACT

- 0975606551
- truonggiang11724@gmail.com
- Thanh Xuan, Hanoi

SKILLS

- Programming Languages: PHP, JavaScript, SQL, Python,...
- Frameworks & Libraries: Laravel, Yii2, NestJS, ReactJS, FastApi
- Databases: MySQL, MongoDB, Database Design, Query Optimization
- Tools & DevOps: Git, Docker, Linux, Azure Deployment
- Concepts: REST API, JWT, OAuth, WebSocket, OOP, MVC
- Other Skills: Teamwork, Research documentation

LANGUAGES

- Proficient in reading and researching technical English documentations
- Basic communication

EDUCATION

Bachelor of Information Technology

Banking Academy

GPA: 3.2 / 4.0

2022 - 2026

PROFILE

Information Technology graduate with hands-on experience in full-stack web development. Experienced in building and deploying web applications using ReactJS, NestJS, Laravel/Yii2, MySQL, MongoDB, Docker, and WebSocket. Strong understanding of REST API development, database optimization, authentication, and real-time systems.

WORK EXPERIENCE

Quantum-IQ AI Company

Fullstack Developer Intern / Developer SEP 2025 - PRESENT

Project:

1. Korean Language Learning Platform (Web Application)

Description: A web-based platform designed for learners (Team size: 1) preparing for EPS, TOPIK I, and TOPIK II exams.

Role: Fullstack Developer (Maintenance & Enhancement)

- Technologies: Yii2, MySQL, WebSocket, JavaScript
- Developed and maintained core features, fixed bugs, and improved application stability
- Implemented real-time gameplay features using WebSocket for live player interactions
- Optimized database queries and system performance to handle high user traffic
- Improved application responsiveness by optimizing frontend rendering and backend processing

Website: videotienghan.com

2. Real-time Quiz Game for Language Learning

Description: An interactive quiz-based game system to support language learning through competitive gameplay. (Team size: 2)

Role: Backend Developer

- Technologies: NestJS, ReactJS, MySQL, MongoDB, Docker, WebSocket
- Designed and developed RESTful APIs for game logic, authentication, and user management
- Implemented secure authentication using JWT, OAuth
- Built real-time gameplay features using WebSocket for live interactions between players
- Deployed and managed the application in a containerized environment using Docker
